FOR IMMEDIATE RELEASE

VIKING INTERWORKS SHIPS ROHS-COMPLIANT MEMORY MODULE PRODUCTS

*Environmentally Friendly RoHS-Compliant Memory Modules Help OEMs Meet
EU Directive by July 2006 Deadline*

RANCHO SANTA MARGARITA, Calif. – May 19, 2005 – Viking InterWorks, a Sanmina-SCI Company (Nasdaq NM: SANM) and designer and manufacturer of memory modules, today announced it is currently shipping RoHS- (Restriction of Hazardous Substances) compliant products to multiple customers, meeting the European Union's (EU's) Directive (2002/95/EC) that requires the removal of a number of hazardous substances, including lead and other materials, from electronic components, products and assemblies by July 1, 2006.

Sanmina-SCI continues to advance its technology leadership role by proactively developing and implementing RoHS-compliant processes and products, successfully partnering with its customers in developing a "green strategy" in advance of the July 1, 2006 deadline. By adopting a "green strategy," organizations work to achieve rapid and cost-effective compliance of their products with pending global environmental protection initiatives such as RoHS.

"We are committed to taking a leadership role in protecting our environment and ensuring our customers have a comprehensive 'green strategy' in place," stated Mark Ellsberry, Vice President of Marketing for Viking InterWorks. "The EU Directive calls for all new electrical and electronic products brought to market after July 1, 2006 to meet specific laws enacted by the individual EU countries. As a result, all Viking InterWorks' components used in the design and manufacture of memory modules are lead free. Additionally, the PCBs used in memory

modules do not contain either PBB or PBDE. Our number one goal is to help our customers meet the emerging global requirements and produce environmentally friendly electronic products.”

Mike Shannon, Senior Vice President of RoHS/WEEE Compliance for Sanmina-SCI added: “By offering RoHS-compliant products well in advance of the July 2006 deadline by the EU, customers can immediately adopt environmentally friendly products and align their organizations with the RoHS Directive as they evolve their businesses in all geographic areas worldwide.”

The Sanmina-SCI RoHS program and “green services” initiative has stringently focused on materials scheduled to be banned under the European Parliament Directive 2002/95/EC, which includes lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE). In addition to industry-leading internal programs, Sanmina-SCI participates in industry and customer-focused lead-free consortia initiatives such as the National Electronics Manufacturers Initiative (NEMI) and IPC/JEDEC committees. Sanmina-SCI’s objective is to encourage and facilitate the open exchange of ideas and technology that will address the needs of our global environment today and in the future.

Part numbers for RoHS-compliant products from Viking InterWorks have been changed to the following: “VI” to “VR.” For more information, visit www.vikinginterworks.com.

About Sanmina-SCI

Sanmina-SCI Corporation is a leading electronics contract manufacturer serving the fastest-growing segments of the global electronics manufacturing services (EMS) market.

Recognized as a technology leader, Sanmina-SCI provides end-to-end manufacturing solutions, delivering unsurpassed quality and support to OEMs primarily in the communications, defense and aerospace, industrial and medical instrumentation, computer technology, and multimedia sectors. Sanmina-SCI has facilities strategically located in key regions throughout the world. More information regarding the Company is available at www.sanmina-sci.com.

Sanmina-SCI Safe Harbor Statement

The foregoing, including the discussion regarding the company's future prospects, contains certain forward-looking statements that involve risks and uncertainties, including uncertainties associated with economic conditions in the electronics industry, particularly in the principal industry sectors served by the company, changes in customer requirements and in the volume of sales to principal customers, the ability of Sanmina-SCI to effectively assimilate acquired businesses and achieve the anticipated benefits of its acquisitions, and competition and technological change. The company's actual results of operations may differ significantly from those contemplated by such forward-looking statements as a result of these and other factors, including factors set forth in the company's fiscal year 2004 Annual Report on Form 10-K filed on December 29, 2004 and 10-Q filed on May 12, 2005 with the Securities Exchange Commission.
